Crude Oil Flow Improvers Market by Type (Paraffin Inhibitors, Asphaltene Inhibitors, Scale Inhibitors, and Hydrate Inhibitors) and Application (Extraction, Pipeline, and Refinery) - Global Opportunity Analysis and Industry Forecast, 2017-2023

BioPortfolio has been marketing business and market research reports from selected publishers for over fifteen years. BioPortfolio offers a personal service to our customers with dedicated research managers who will work with you to source the best report for your needs. Based in the UK, BioPortfolio is well positioned to coordinate our customers' orders sourced from over 50 global report publishers.

We are pleased to present details of this report to assist your buying decision and administrative process. You will find easy-to-use *How To Buy* information on the last page of this document.

We look forward to being of service to you.

If you have bulk and/or recurring requirements, please get in touch - we can liaise with publishers to obtain sample pages and negotiate discounts on your behalf.

Crude Oil Flow Improvers Market by Type (Paraffin Inhibitors, Asphaltene Inhibitors, Scale Inhibitors, and Hydrate Inhibitors) and Application (Extraction, Pipeline, and Refinery) - Global Opportunity Analysis and Industry Forecast, 2017-2023

The global crude oil flow improvers market was valued at \$1,282 million in 2016, growing at a CAGR of 5.7% to reach \$1,920 million by 2023. Crude oil flow improvers function as additive that provides suitable solution during crude oil extraction processes and maximize the production. Viscosity of heavy crude oil is crucial for long-distance transport to maintain its quality or state. Crude oil flow improvers enable reduction in viscosity of oil for processing and transport, thereby improving production performance and reducing operational costs. It is extracted from remote locations; hence, it is essential to transport extracted oil to appropriate destinations through pipelines, which is the most preferred and efficient way. High viscosity of heavy crude oil and its transportation specifically in cold regions is quite challenging as it becomes thicker with the decrease in temperature. Thus, crude oil flow improvers are widely used to control viscosity, reduce the turbulence, and increase the flow rate inside the pipelines.

In 2016, North America led the global crude oil flow improvers market, owing to the increase in adoption of nontraditional oil extraction techniques such as hydraulic fracturing and horizontal drilling. It increases the production of crude oil, in turn boost the need for flow improvers to reduce viscosity of oil to move freely through pipes. U.S. was the leading country in the North America crude oil flow improvers market, followed by Canada. LAMEA followed North America, owing to the increase in investment in the development of new oil well and rise in demand for crude oil flow improvers. The global market is driven by the increase in crude oil production globally owing to high demand and rise in demand for crude oil flow improvers from the developing markets such as Middle East and Africa. Moreover, rise in hydraulic fracturing is expected to increase the demand for crude oil flow improvers. However, steady decline in crude oil prices and environmental concerns are expected to hamper the market growth in the near future.

The global crude oil flow improver market is segmented based on type, application, and geography. On the basis of type, it is divided as paraffin inhibitors, asphaltene inhibitors, scale inhibitors, and hydrate inhibitors. On the basis of application, it is categorized into extraction, pipeline, and refinery. Geographically, it is analyzed across North America, Europe, Asia-Pacific, and LAMEA.

In November, 2015, Baker Hughes launched the high-performance and low-dosage asphaltene inhibitor that help to control asphaltene deposition with better flow assurance and minimize the risk of blockages in production lines & equipment.

The major market players are as follows:

Halliburton Company

Baker Hughes

Nalco Champion

BASF SE

Schlumberger

Clariant

Dorf Ketal

Lubrizol Specialty Products, Inc.

Infineum

Evonik Industries.

KEY BENEFITS FOR STAKEHOLDERS

This report provides an extensive analysis of the current & emerging market trends and dynamics of the global crude oil flow improver market.

In-depth analysis of all regions is conducted by constructing the market estimations for key segments from 2017 to 2023 to identify the prevailing opportunities.

The report assists to understand the strategies adopted by the companies for market expansion.

This study evaluates the competitive landscape to understand the market scenario across various regions.

Extensive analysis is conducted by following key player positioning and monitoring the top competitors within the market framework.

KEY MARKET SEGMENTS

By Type

Paraffin Inhibitors

Asphaltene Inhibitors

Scale Inhibitors

Hydrate Inhibitors

By Application

Extraction

Pipeline

Refinery

By Geography

North America

U.S.

Canada

Mexico

Europe

UK

Germany

France

Denmark

Italy

Rest of Europe

Asia-Pacific

China

India

Japan

South Korea

Australia

Rest of Asia-Pacific

LAMEA

Brazil

Argentina

Saudi Arabia

Rest of LAMEA

The other major players in the industry include the following:

WRT BV

Production Chemical Group

Rodanco

Partow Ideh Pars

Phillips Specialty Products Inc.

*The above list of companies is not profiled in the report, but can be added based on interest.
