BioPortfolio has been marketing business and market research reports from selected publishers for over fifteen years. BioPortfolio offers a personal service to our customers with dedicated research managers who will work with you to source the best report for your needs. Based in the UK, BioPortfolio is well positioned to coordinate our customers' orders sourced from over 50 global report publishers.

We are pleased to present details of this report to assist your buying decision and administrative process. You will find easy-to-use *How To Buy* information on the last page of this document.

We look forward to being of service to you.

If you have bulk and/or recurring requirements, please get in touch - we can liaise with publishers to obtain sample pages and negotiate discounts on your behalf.

Reprocessed Medical Devices Market, By Disease Condition (Cardiovascular, Laparoscopic, Orthopedic, Gastroenterology, and others), By End Use (Hospitals, Home Facility, and Others) And Geography (North America, Europe, Asia Pacific, And Rest Of The World) – Analysis, Share, Trends, Size, & Forecast From 2016 – 2027- COVID- 19 Updated

REPORT HIGHLIGHT

The reprocessed medical devices market is estimated to represent a global market of USD 2.09 billion by 2019 with growth rate of 21.3%.

Variety of single-use medical devices emerges in the market over the last few decades in order to prevent disease transmission to other patients. However, due to economic reason, the practice of reprocessing single usable medical devices is evolved among many healthcare settings in past few years. Needlessly discarding such equipment post-use, these facilities have begun to reprocess them. As per the survey conducted by the Newfoundland and Labrador Centre for Applied Health Research, in October 2010, stated that rapid growth in the healthcare industry has pressured hospital setting to reuse costly medical devices, intended for single use.

The growth of reprocessed medical devices is primarily driven by the rising pressure of government bodies to reduce the volume of regulated medical wastes by healthcare companies. For example, according to the World Health Organizations (WHO), modern hospital settings generate a large amount of solid medical waste, ranging from single-use medical devices to electronics. The organization estimated that around 15% to 25% healthcare waste contains chemical, biological or radiological hazard. This has fuelled the demand for the utilization of reprocessed medical devices, leading to the market growth.

Furthermore, the uptake of reprocessed medical devices is increasing rapidly due to its cost-effectiveness. According to the American College of Cardiology, more than half the U.S.'s hospital facilities send some of their single-use medical devices to Reprocesses. Previously, a majority of reprocessing process was carried out in hospital reprocessing centres. Nowadays, third party reprocessing industry has emerged which offers an efficient way of reprocessing needs. On another side, existing variability in end-users approach to reuse and reprocess medical devices adds ethical issues and poses a potential risk to the patient's safety. It is noticed that medical facilities do not undertake comprehensive evaluation before reusing disposable medical equipment. These have raised concerns regarding the patient safety, environmental risk, and legal liability to utilize single-use medical devices.

COVID-19 Impact & Recovery Analysis

The proposed report from AnalystView Market Insights suggests three possible forecast scenarios (probable, optimistic, and pessimistic) considering the COVID-19 impact. Our ongoing research analysis amplifies our framework to ensure the inclusion of underlying COVID-19 crisis impact and potential paths forward. The designed report is delivering detailed insights on COVID-19 considering the changes in consumer demand, purchasing patterns, re-routing of the supply chain, and the significant interventions of governments. The

updated study provides insights, and forecast, considering the COVID-19 impact on the market.

Regionally, North America captured the largest share of the global market. Increasing need for reprocessing medical devices and advancement in technologies would, in turn, drive the market growth. For example, the Canadian Agency of Drugs and Technologies in Health (CADTH) conducted a study to identify the need for reprocessing single-use medical devices. The study revealed that more than 30% of the healthcare facilities routinely reused medical equipment, intended for single-use. Developing regions such as Asia Pacific and Latin America is expected to grow with the highest growth rate owing to the rising demand for cost-effective medical devices.

Companies such as GE Healthcare, Stryker Sustainability Solutions, Sterilmed, Inc., Suretek Medical, and others are profiled in the report. Stryker Sustainability Solutions is considered to be the major participant in global market owing to extensive promotional activities, strong product portfolio, and strategic alliances. For instance, the company implements most impactful initiatives to provide reprocessing services. The company undertakes reprocessing procedures through rigorous studies such as design verification, design validation, reverse engineering, cleaning and sterilizing and performance testing. These will contribute towards the significant market share of companies during the future period.

The market size and forecast for each segment has been provided for the period 2016 to 2027, considering 2019 as the base year. The report also provides the compounded annual growth rate (% CAGR) for the forecast period 2021 to 2027 for every reported segment.

The years considered for the study are:

Historical Year - 2016 to 2018

Base Year - 2019

Estimated Year - 2020

Projected Year - 2027

The proposed reports analyse and evaluates the COVID-19 impact, and anticipated change on the future market scenario on this industry, by taking into the account the economic, political, technological, and social, parameters.

Publisher Information :

AnalystView Market Insights is a market research and consulting firm that adopts a proactive approach to provide the diverse need for accurate and precise market research, custom research, and consulting solutions

across geographies and industry verticals. Our company is led by a team of passionate, naturally curious, and strategic thinkers from different industry backgrounds.

These experts are dedicated to creating concrete market data analysis in various industries such as Healthcare, Bulk Chemicals, Semiconductors and Electronics, Foods and Beverages. We strive to develop meaningful and evidence-based research data that helps our clients, empowering organizations and brands of all sizes with strategic analysis, accurate data, and consumer trends.

We aim to be the number one choice for various clients who require credible data to make vital business decisions. We wish to be a trusted and reliable analytics partner to major business organizations.

We understand that critical business decisions can be taken only when verified, authentic information is available. Therefore, our experts work meticulously to provide our clients with the accurate data, so that they need not spend time in verifying it.

It is also our goal to help our clients ignore traditional research methods that require a large amount of capital, manpower, and most important of it all - the time. We know that these factors are precious to a company and always follow the latest research techniques that produce the required result in a short span of time.
