BioPortfolio has been marketing business and market research reports from selected publishers for over fifteen years. BioPortfolio offers a personal service to our customers with dedicated research managers who will work with you to source the best report for your needs. Based in the UK, BioPortfolio is well positioned to coordinate our customers' orders sourced from over 50 global report publishers.

We are pleased to present details of this report to assist your buying decision and administrative process. You will find easy-to-use *How To Buy* information on the last page of this document.

***We look forward to being of service to you.***

*If you have bulk and/or recurring requirements, please get in touch - we can liaise with publishers to obtain sample pages and negotiate discounts on your behalf.*

## REPORT HIGHLIGHT

Healthcare cognitive computing market was valued at USD 3.67 billion by 2019, growing with 24.5% CAGR during the forecast period, 2020-2026.

Cognitive computing is widely used in diverse industries such as government, healthcare, retail, banking, IT & telecom, security, and insurance. A large volume of complex data is being generated owing to increasing digitalization. This data could be in various forms, including videos, human language, and pictures. With the help of cognitive computing systems, this dark data can be analyzed to deduce useful insights. Healthcare cognitive computing is the method of self-learning systems that utilize data mining techniques, system refinements, voice recognition, pattern recognition, natural language, and human senses processing. The cognitive computing enabled physicians and other healthcare providers to better diagnose and treat their patients based on real-time monitoring and diagnosis of patients.

## Market Dynamics

Increasing the prevalence of chronic diseases coupled with the growing adoption of advanced technologies such as cloud platforms, machine learning for the treatment of such conditions will support the global healthcare cognitive computing market growth. As per the World Health Organization (WHO), more than 18 million cancer cases were recorded in 2018, globally. The organization estimated that one in 5 men and 6 women worldwide develop cancer during their lifetime. Hence, such a huge population of cancer can be treated, monitor, and diagnosed with advanced cognitive computing technologies, driving the market growth.

Favorable government support for the development of big data and the cognitive computing sector would, in turn, establish a healthy platform for industry growth. For instance, in March 2020, Health Information Technology for Economic & Clinical Health (HITECH) expanded the exchange of electronically protected health information (ePHI) between hospitals, doctors, and other healthcare entities. The amendment has also suggested the use of Electronic medical records (EMRs) in almost 70-90% of healthcare providers and allocated USD 2 billion for workforce training and infrastructure improvement. Such initiatives will strongly support the development of healthcare cognitive industry, augmenting the industry growth. In addition, increasing R&D by private companies in this sector coupled with an increasing number of pharmaceutical players supports the overall industry growth to some extent. Conversely, a lack of skilled professional for use of this advanced technology is predicted to impede the growth of the cognitive computing technology market.

## Technology Takeaway

In terms of technology, the worldwide healthcare cognitive computing market is categorized into machine learning (ML), natural language processing (NLP), and automated reasoning (AR). Among which, the natural language processing category accounted for the majority of industry share in 2019, around 45% share throughout the study period. Increasing adoption of cloud-based solutions and smart devices usage coupled with growing usage of NLP-based applications to improve customer service support the segment growth. On the flip side, machine learning, and automated reasoning categories are growing with a positive annual growth rate. Advancement in technologies is considered to be one of the primary driving factors for the growth of these segments.

## End-use Takeaway

Depending on the end-use, the overall market is bifurcated into medical devices, pharmaceuticals, hospitals, and insurance. Among these, the hospitals have captured the highest revenue share and are projected to continue its dominance over the study period. Rising need to analyze structured and unstructured data including various insurance data, medical records, and clinical data in hospitals will support the segment growth. On the flip side, pharmaceutical, and medical device companies are projected to grow with a promising growth rate during the study period. Increasing chronic disease conditions coupled with the growing demand for medical devices will support the segment growth.

## Regional Takeaway

Regionally, the overall market is divided into North America, Middle East & Africa, Asia Pacific, Latin America, and Europe. The North America healthcare cognitive computing market registered the majority of market share in 2019. Regional growth is mainly attributed to the high healthcare expenditure, coupled with the growing adoption of advanced technologies in medical sectors. As per the International Federation of Pharmaceutical Manufacturers & Associations (IFPMA) in 2018, the U.S. government has saved more than USD 4 billion by implementing advanced technologies in healthcare.

Furthermore, increasing chronic disease conditions support the uptake of such technologies in the medical sectors. According to the American Cancer Society (ACS), there were more than 740,000 cancer cases registered in the U.S. in 2019. Such factors would, in turn, establish a healthy platform for market growth. On the other hand, the Asia Pacific is anticipated to be the fastest-growing region throughout the forecast. Large number of patient populations coupled with favorable government initiatives to support the medical sector will help this region to grow consistently.

## COVID-19 Impact

Due to the sudden outbreak of COVID-19, the industry is witnessing a surge in the utilization of advanced technologies for recording the clinical data. Furthermore, many prominent players have started investing in the healthcare cognitive computing, artificial intelligence, and machine learning sectors. For instance, in April 2020, Microsoft donated around USD 20 million to support COVID-19-related research efforts in data science, artificial intelligence, and diagnostics. This grant will support the company's efforts of AI for Health initiative. Likewise, at the same time, HCA healthcare collaborated with the Google Cloud to develop new open data platform to promote data sharing during the COVID-19 pandemic. Thus, such developments will significantly support the overall growth of the healthcare cognitive computing field during the near future.

## Key Vendor Takeaway

The leading players of the global healthcare cognitive computing market are Enterra Solutions, Vicarious, Numenta, Saffron Technologies, PTC, Inc., Palantir Technologies, CognitiveScale, Microsoft Corporation, Google, Inc., and IBM Watson Health. Among these, IBM Company is identified as one of the market leaders, primarily due to the company's extensive service portfolio in oncology, clinical trials, clinical advisory functions, and others.

Key players are actively involved in strategic mergers and acquisitions to capture a large customer base. For example, recently, in February 2020, Google closed the acquisition of California based data analytics startup, Looker Data Sciences, Inc. This acquisition helped the company to obtain a strong position for supporting all cloud data management systems in the global industry.

The market size and forecast for each segment and sub-segments has been considered as below:

Historical Year - 2015 to 2018

Base Year - 2019

Estimated Year - 2020

Projected Year - 2026

**Publisher Information** :

AnalystView Market Insights is a market research and consulting firm that adopts a proactive approach to provide the diverse need for accurate and precise market research, custom research, and consulting solutions across geographies and industry verticals. Our company is led by a team of passionate, naturally curious, and strategic thinkers from different industry backgrounds.

These experts are dedicated to creating concrete market data analysis in various industries such as Healthcare, Bulk Chemicals, Semiconductors and Electronics, Foods and Beverages. We strive to develop meaningful and evidence-based research data that helps our clients, empowering organizations and brands of all sizes with strategic analysis, accurate data, and consumer trends.

We aim to be the number one choice for various clients who require credible data to make vital business decisions. We wish to be a trusted and reliable analytics partner to major business organizations.

We understand that critical business decisions can be taken only when verified, authentic information is available. Therefore, our experts work meticulously to provide our clients with the accurate data, so that they need not spend time in verifying it.

It is also our goal to help our clients ignore traditional research methods that require a large amount of capital, manpower, and most important of it all – the time. We know that these factors are precious to a company and always follow the latest research techniques that produce the required result in a short span of time.
