Alpha-fetoprotein (AFP) Testing Market: By Cancer Type (Liver Cancer, Testes Cancer, Ovarian Cancer, Biliary Tract Cancer, Stomach Cancer, Pancreatic Cancer, Others (Cirrhosis, and Hepatitis)) & Geography-Forecast (2016-2021)

An alpha-fetoprotein (AFP) test is a blood test that measures the amount of AFP present in blood. It's usually part of what's called a triple screen or quad screen in the second trimester of pregnancy. The AFP protein found in humans is encoded by the AFP gene that is located on chromosome 4. The yolk sac and immature liver of an unborn baby produce AFP which then circulates through the fetal and maternal blood. Infants usually have higher levels of AFP protein which falls to normal adult level by the end of first year. AFP tests are commercially available and widely used for testing various cancer related test. AFP market is expected to increase due to increasing awareness towards cancer and globally increasing incidences of cancer and related illnesses which is also driving cancer diagnostic segment globally and is growing exponentially with huge expenditure being done on research and development activities being carried out to discover new techniques and specific antigens to further enhance the treatment mode.

This report identifies the AFP Testing market size in for the year 2014-2016, and forecast of the same for year 2021. It also highlights the potential growth opportunities in the coming years, while also reviewing the market drivers, restraints, growth indicators, challenges, market dynamics, competitive landscape, and other key aspects with respect to AFP Testing market.
