Antihypertensive Drugs Market Analysis: By Type (Diuretics, Angiotensin Converting Enzyme (ACE) Inhibitors, ARBs, Calcium Channel Blockers, Beta Blockers, Alpha Blockers, Vasodilators & Renin Inhibitors); □ With Forecast (2016-2021)

Hypertension is a medical condition in which the blood pressure of an individual is elevated to a level beyond what is the desired level. As a result of this, a number of other conditions such as blood pressure and mental distress can take place. The number of cases of hypertension has grown exponentially in the last decade. Key reason for this has been the drastic change in lifestyle and diet intake. Within individuals working around the clock around different time zones, the required time for an individual to take rest is no longer sufficient. Individuals need plenty of sleep to recover and to be reenergized, however, exactly the opposite takes place with people not getting enough sleep, no exercise, no proper intake of healthy food all of which adds to hypertension in the long run.

Once the condition of hypertension has set in, the drugs which are required to keep this under control may be required for the rest of the individual's life depending on the severity of the condition. In a way, this in itself is a case for the drug developers that there will always be a sustainable demand for the product. Hypertension is a condition which was recognized in the United States much ahead of many of the other regions with the antihypertensive drugs being sold right from day one in this country. There are also cases of a number of individuals taking these drugs as a preventive measure, as many doctors believe that the age group that this affects is slowly increasing in terms of range. Unless there are drastic lifestyle changes and changes in the diets of individuals, hypertension is expected to affect a vast volume of the working population over the next few years, especially in the APAC region with a number of companies and individuals working across different time zones.

Antihypertensive Drugs Market

The Antihypertensive Drugs market can be segmented on the basis of type as:

Diuretics

Angiotensin Converting Enzyme (ACE) Inhibitors

Angiotensin Receptor Blockers (ARBs)

Calcium Channel Blockers

Beta Blockers

Alpha Blockers

Vasodilators

Renin Inhibitors

The market has been segmented based on the following geographies:

North America

South America

APAC

Europe

Middle East

Africa

Following are just a few of the companies that are operating in the Antihypertensive Drugs market:

Astra Zeneca Plc

Daiichi Sankyo Company

Johnson & Johnson Ltd

Lupin Limited

Merck & Co
